About Program

At a time of a global pandemic, a company's role in contributing to solving non-market issues is more important than ever. ESG has become a top priority on investors' agendas. Boards and executives increasingly see ESG topics as important to long-term value creation and need to meet investor demand for ESG information in a way that drives value for the company and society. It is difficult to assess how a company is contributing to outcomes that are important for stakeholders and societies. Investors and other stakeholders need to know non-financial performance to allocate capital efficiently to drive progress towards a sustainable society.
